防爆热电偶

Explosion-proof Thermocouple

产品应用

Product Application

通常和显示仪表、记录仪表、电子计算机等配套使用。直接测量生产现场存在爆炸性混合物的（0～1300）℃范围内液体、蒸汽和气体介质以及固体表面温度。

Usually used in conjunction with display instruments, recording instruments, electronic computers and so on. Direct measurement of various production processes (0～1300)℃ range of liquid, steam and gas media and solid surface temperature.

产品原理

Product Principle

防爆热电偶是利用间隙隔爆原理，设计具有足够强度的接线盒等部件，将所有会产生火花、电弧和危险温度的零部件都密封在接线盒腔内，当腔内发生爆炸时，能通过接合面间隙熄火和冷却，使爆炸后的火焰和温度传不到腔外，从而进行隔爆。

According to the gap explosion-proof principle, explosion-proof thermocouples are designed with sufficient strength of the junction box and other components, all the parts that will produce sparks, arcs and dangerous temperatures are sealed in the junction box cavity. When an explosion occurs in the cavity, it can be quenched and cooled through the gap between the joint surfaces, so that the flame and temperature after the explosion can not be transmitted outside the cavity, thus providing explosion-proof.

产品原理

Product Principle

防爆热电偶利用间隙隔爆原理，当腔内发生爆炸时，能通过接合面间隙熄火和冷却，使爆炸后的火焰全温度传不到腔外，从而进行防爆。

防爆热电阻是利用物间隙隔爆原理，设计具有足够强度的接线盒等部件，将所有会产生火花、电弧和危险温度的零部件都密封在接线盒腔内，当腔内发生爆炸时，能通过接合面间隙熄火和冷却，使爆炸后的火焰和温度传不到腔外，从而进行隔爆。

热电偶（热电阻）产生的热电势（电阻）经过温度变送器的电桥产生不平衡信号，经放大后转换成为4~20mA的直流电信号给工作仪表，工作仪表便显示出所对应的温度值。

When an explosion occurs in the cavity, the explosion-proof thermocouple utilizes the gap explosion isolation principle to extinguish and cool the flame through the joint surface gap, so that the flame temperature after the explosion can not be transmitted to the outside of the cavity, thus providing explosion-proof.

SBW系列温度变送器

SBW Series Temperature Transmitter

产品概述

Product Application

SBW系列热电偶、热电阻温度变送器是现场安装式温度变送器单元，与工业热电偶、热电阻配套使用，它采用二线制传输方式（两根导线作为电源输入和信号输出的公用传输线）。将工业热电偶、热电阻信号转换成与输入信号或与温度信号成线性的4-20mA、0-10mA的输出信号。

该变送器可直接安装在热电偶、热电阻的接线盒内与之形成一体化结构。它作为新一代测温仪表可广泛应用于冶金、石油、化工、电力、轻工、纺织、食品、国防以及科研等工业部门。

SBW Series Thermocouple, Thermal Resistor temperature transmitter is a field mounted temperature transmitter unit, which is used in conjunction with industrial thermocouples and RTDs. SBW Series Thermocouple, Thermal Resistor temperature transmitter adopts the two-wire transmission mode (two wires as the power input and signal output of the common transmission line). SBW Series Thermocouple, Thermal Resistor temperature transmitter can be industrial thermocouple, RTD signal into the input signal or with the temperature signal into a linear 4~20mA, 0-10mA output signal.

The transmitter can be directly installed in the junction box of thermocouple and RTD to form an integrated structure. As a new generation of temperature measuring instruments, SBW Series Thermocouple, Thermal Resistor temperature transmitter can be widely used in metallurgy, petroleum, chemical industry, electric power, light industry, textile, food, national defense and scientific research and other industrial sectors.

产品原理

Product Principle

热电偶或热电阻传感器反被测温度转换成电信号，再将该信号送入变送器的输入网络，该网络包含调零和热电偶补偿等相关电路。经调零后的信号输入到运算放大器进行信号放大，放大的信号一路经V/I转换器算处理后以4～20mA直流电流输出；另一路经A/D转换器处理后到表头显示。变送器的线性化电路有两种，均采用反馈方式。对热电阻传感器，用正反馈方式校正，对热电偶传感器，用多段折线逼近法进行校正。一体化数字显示温度变送器有两种显示方式。LCD显示的温度变送器用两线制方式输出，LED显示的温度变送器用三线制方式输出。

The thermocouple or thermal resistance sensor converts the measured temperature into an electrical signal, and then sends the signal to the input network of the transmitter, which includes related circuits such as zero adjustment and thermocouple compensation. The zeroed signal is input to the operational amplifier for signal amplification. One path of the amplified signal is processed by the V/I converter and then output as 4~20mA DC current, and the other path is processed by the A/D converter and then displayed on the meter head. There are two types of linearization circuits for the transmitter, both of which use feedback. For the thermal resistance sensor, the positive feedback method is used for correction, and for the thermocouple sensor, the multi-segment broken line approximation method is used for correction. The integrated digital display temperature transmitter has two display modes. The temperature transmitter with LCD display is output in two-wire mode, and the temperature transmitter with LED display is output in three-wire mode.
